Dear Crash Data Researchers/Users:

Thank you for choosing crash data from the National Highway Traffic Safety Administration (NHTSA) for your research or other use. The information contained in this motor vehicle crash report is collected, maintained and distributed in accordance with Public Law 89-564. In accordance with this Public Law, NHTSA is required not to release any case information until completion of quality control procedures. These procedures include a review of the case material to extract all names, licenses and registration numbers, non-coded interview material, non-research related researcher comments in the margins, non-factual data, and the production number portion of the vehicle identification number (VIN).

If you requested NHTSA to query its database files in order to identify a specific crash, then that query was made using non-personal descriptors you provided for use in our search. This motor vehicle crash may have been identified from a data search and matches the general, non-personal descriptors you provided, but we cannot confirm that this is the specific crash report you requested.

If you have any questions with regard to the above procedures, please contact the Field Operations Branch, Crash Investigation Division, National Center for Statistics and Analysis at 202-366-4820. Again, please be advised that we cannot confirm that this is the case that you have specifically requested nor can we certify the information to be correct.

Case Vehicle (A): 1998 Cadillac
 Type: DeVille, 4-door sedan
 Driver: 73-year-old male
 CDC: 12-FDEW-2

SITUATION

(Slide 1) It was daylight, the sky was clear, and (slide 2) the road surface of the six-lane divided, limit-access, asphalt freeway was dry and free of defects. Case vehicle (A) was traveling east at a driver-estimated speed of 113 kph (70 mph) in the right eastbound lane. The driver reportedly had the cruise control activated and set at this speed. (Slide 3) The driver and right-front passenger of case vehicle (A) both fell asleep, and the vehicle drifted to the right and exited the south edge of the road surface. (Slide 4) Case vehicle (A) went between the guardrail and a large tree, (slide 5) and into a roadside drainage ditch. (Slides 6 and 7) Case vehicle (A) continued down the roadside drainage ditch, (slide 8) ran over a dead tree, and went down a hill. (Slide 9) Case vehicle (A) continued downhill, (slides 10, 11 and 12) sideswiped some bushes, (slide 13) and struck the embankment on the opposite side of a creek with its front. The driver and right-front passenger of case vehicle (A) were transported by ambulance to a local hospital where they were treated and released. Case vehicle (A) was towed due to damage.

GENERAL VEHICLE DAMAGE AND ESTIMATED CRASH SEVERITIES

(Slide 14) Overall damage to case vehicle (A) was moderate. Direct damage to case vehicle (A) was to the entire frontal plane. (Slide 15) The maximum crush was 31 cm to the center of the vehicle front.

Using the WinSMASH accident-reconstruction program, and (slides 16, 17, 18 and 19) a crush profile measured for case vehicle (A), the following impact severity was calculated:

Vehicle	Variable	Calculated Velocity Change - kph (mph)		
		Total	Longitudinal	Latitudinal
Case Vehicle (A)	EBS	19 (12)	-19 (-12)	0 (0)

DESCRIPTION OF DAMAGE TO CASE VEHICLE (A)

Exterior

(Slide 20) In the front, both headlight assemblies, the grille, the hood, the hood latch, (slides 21, 22 and 23) both hood hinges, the upper and lower radiator supports, and the center-front engine compartment were damaged. The hood latch was jammed closed, but was pried open by rescue or towing personnel. (Slide 24) The rear edge of the hood was elevated and it contacted and cracked (slides 25 and 26) both corners of the windshield. (Slide 27) The right portion of the windshield was cracked by the deploying passenger airbag.

On the left side, (slide 28) the fender and the lower A-pillar were deformed, (slides 29 and 30) and the front door window frame was bent outward. (Slide 31) There was no other left-side damage, and no significant change in the left wheelbase.

On the right side, (slide 32) the front fender was deformed. (Slide 33) There was no other right-side damage, and no significant change in the right wheelbase.

(Slides 34 and 35) There was no damage to the rear of the vehicle.

Interior

This vehicle was equipped with steering-wheel and passenger frontal-impact airbags, and (slides 36, 37 and 38) both deployed during the frontal impact. This vehicle was equipped with driver and passenger side-impact airbags, which are located in the outboard sides of the front seatbacks, but neither of these airbags deployed. (Slides 39, 40, 41 and 42) There was no damage to the steering-wheel or (slide 43) passenger airbag module covers (the passenger airbag cover is the upper instrument panel). (Slides 44 and 45) There was no damage to the steering-wheel rim or (slide 46) spokes. There was no apparent horizontal or vertical displacement of the steering column. (Slide 47) The knee bolster to the left of the steering column was dented. (Slides 48 and 49) The rear-view mirror was knocked off of its mount. (Slides 50 and 51) The upper instrument panel/passenger airbag cover and upper vent outlets were knocked loose by deployment of the passenger airbag. (Slide 52) The vanity mirror on the right sunvisor was cracked. (Slide 53) The grip handle mounted on the left-rear roof siderail was damaged. (Slides 54, 55, 56, 57, 58, 59 and 60) There was no other interior damage and no measurable intrusions.

OCCUPANT KINEMATICS AND INJURIES

(Slide 61) The 6-ft, 1-in, 185-lb, 73-year-old male driver was wearing the three-point belt and the frontal-impact airbag deployed. (Slide 62) There was no visible webbing imprint on the plastic D-ring, but plastic transferred onto the belt webbing from the D-ring indicates belt use at the time of the crash.

On impact, the driver moved forward relative to the vehicle interior, and into the belt restraint and airbag. The driver sustained a bloody nose, probably due to contact by the deploying airbag (slide 63) as indicated by blood on the airbag fabric just to the right of the center. He sustained a small contusion to the left side of his chest, probably due a ballpoint pen in the breast pocket of his shirt that was contacted by the shoulder belt and/or the airbag. He sustained an abrasion to the dorsal aspect of his left hand, possibly due to the airbag flinging his hand into the driver door interior panel, (slide 64) as indicated by a black mark on the lower interior door trim.

(Slide 65) The 5-ft, 9-in, 160-lb, 68-year-old female, right-front passenger was wearing the three-point belt and the frontal-impact airbag deployed. (Slide 66) There was no visible webbing imprint on the plastic D-ring, (slide 67), but plastic transferred onto the belt webbing from the D-ring indicates belt use at the time of the crash.

On impact, the right-front passenger moved forward relative to the vehicle interior, and into the belt restraint and airbag. (Slides 68) There was lipstick and makeup transferred onto the airbag fabric. The right-front passenger sustained a contusion to the lower left side of her chest, probably due to contact with the shoulder belt.

The following tables and attached drawings (slide 69 and 70) summarize the injuries for the two occupants of case vehicle (A).

VEHICLE OCCUPANT CONTACT DIAGRAM

CODES FOR COLUMN B, OCCUPANT SPACE NUMBER

OCCUPANT SPACE NUMBER IS A TWO-DIGIT CODE. THE USE OF THE CODE IS DETERMINED BY THE VEHICLE SEAT CONFIGURATION AT THE TIME OF THE ACCIDENT.

FIRST DIGIT

THE FIRST DIGIT (LEFT DIGIT) DENOTES THE SEAT ROW, WITH CODE VALUES FROM 1 TO 5.

SECOND DIGIT

THE SECOND DIGIT (RIGHT DIGIT) DENOTES THE POSITION ON THE SEAT AND, IN SOME INSTANCES, THE WIDTH OF THE SEAT.
